Activity 10 · Lifecycle Creative from Evidence

TGS-2022017520 · v14.0 · Synthetic training data

Goal

A fictional email campaign targets enquiry and enrolled segments. Cowork must adapt evidence-backed messages to a brand brief while preserving consent rules, avoiding fabricated urgency and producing drafts for human review.

Before you start

Use a copied activity folder,Claude Cowork or Claude Code as specified,and a spreadsheet or Python3 for independent checks. No production credentials are needed. Product access varies;CSV fallback remains valid.

Mock data and assets

mock-data/lifecycle.csv

All named customers,competitors,campaigns and values are fictional. Assets include brand,source,measurement and decision contracts.

Mechanism

Evidence brief -> segment need -> approved claim -> channel/consent constraint -> draft variant -> human brand review -> measurement hypothesis.

Digital Marketing’s email and relationship concepts plus Customer.io’s marketer examples are adapted into segment-specific claims,consent-aware drafts and a human-review status. The course does not adopt older vendor FAQs as current connector mechanics.

Worked calculation

Click rate uses sent: 16/80=20%,12/40=30%,18/90=20%. Enrolment per sent: 5%,15%,10%; no claim of incremental email impact.

Step-by-step

1. Read lifecycle.csv,assets/brand-guide.md and assets/approved-claims.csv.
2. Confirm eligible and sent represent different denominators.
3. Ask Cowork Prompt 1 for three evidence-linked drafts.
4. Calculate click and enrolment-per-sent rates.
5. Check each draft against approved CL01-CL03 claims.
6. Remove unsupported scarcity, promises and invented testimonials.
7. Use Prompt 2 to critique tone, consent and opt-out requirements.
8. Save drafts and review checklist; do not connect a sending account.

Prompt1

Create lifecycle email drafts for three synthetic segments using approved brand and claim assets. Include claim_ids, rationale, CTA and human-review status. Do not send or invent scarcity. Calculate rates using sent, with non-causal interpretation.

Prompt2

Challenge the previous result. Find denominator errors,unsupported claims,bias,privacy risks and unexecuted tool boundaries. Cite exact row IDs or fields. Revise the report without inventing data.

Acceptance evidence

Three segment drafts; claim IDs and CTA; no invented scarcity; send_authorised false; rates use sent.

Failure and recovery

A draft says only two seats remain without inventory evidence. The urgency claim must be removed or verified by an authorised source.

Draft only; no send authorisation. Use approved factual claims, consented audiences, clear opt-out and reviewer sign-off. Avoid interpreting synthetic clicks as causal lift.

Submit

message-variants.md and review-checklist.csv

Save outputs in this working copy. Keep an execution note stating which product actions actually ran and which used fallback.
